## **Welcome**

To our 11th on property ram sale.

We continue to increase the number of rams we produce each year. 2018 was a difficult year all round, however we managed to produce higher lamb numbers. The majority of these lambs are above breed average for BLX Index. We have taken into consideration the seasonal conditions and ewe numbers of our ram buyers and we made the decision to reduce the offering to 72 rams. The rams on offer are the top of the rams we bred in 2018.

We have always had as one of our unwritten breeding objectives to offer a full catalogue of Superborder rams and this year we have achieved this objective comfortably with quality rams remaining in the paddock. A number of initiatives which we have implemented have been driving the increased rate of genetic gain across our flock. The use of young sires within the joining program and use of Matesel are two such initiatives.

We can now offer an all weather sale venue with a new shed over the yards to accommodate all sale rams. In those years when weather is unfavourable, we will be offering all sale rams under cover at New Armatree.

We are still showing sheep in conjunction with Gilgandra High School students. This partnership exposes students to sheep handling skills and Australian Sheep Breeding Values, ASBVs. We again had a successful showing at the local shows plus the NSW State Sheep Show at Dubbo.

We hope to see some familiar faces at the sale even if it is only to sample the BBQ or for a catch up. It is important to get out in times like we are currently experiencing and ask, Are You Ok?

*Jenny and Craig Bradley*

**Please bring this catalogue with you on sale day.**

## **'New Armatree' Health Record**

'New Armatree' is within the  
Coonamble Biosecurity Zone

Brucellosis Flock Accreditation No.....Cw 99/17  
Expiry Date.....August 2022

Vaccinated with 6 in1 at marking and weaning  
Last vaccination 11th August, 2019

Shorn 10th June 2019

These rams have had a worm egg count on 15th  
August, 2019 and returned a zero egg count.

We recommend that you quarantine drench your  
rams when you get them home, according to your  
drench resistance and rotation program.

All rams have had no feet trimming,  
feet are untouched.

Rams are presented in pens for sale  
with no straw.

All Rams Vet inspected and checked:  
Tuesday 10th September, 2019  
by Dr Nadine Allan, Gilgandra Veterinary Clinic.

## Memorandum of Sires used at 'New Armatree' in the 2018 Breeding Season

- **New Armatree 2015/0070 (F8919)** Blue disks  
Sire: New Armatree Australis 2013/0021 (F6059)
- **New Armatree 2016/0146 (F8920)** Black disks  
Sire: New Armatree 2015/0026 (F7998)
- **New Armatree 2016/0324 (F9458)** Red disks  
Sire: Jackson Smooth Criminal 2014/0095 (F7973)
- **New Armatree 2016/0093 (F9467)** Black disks  
Sire: New Armatree 2015/0023 (F7997)
- **New Armatree 2016/0083 (F9456)** Pink disks  
Sire: Hanookra 2014/0132 (F7618)
- **Gleneith 2016/0329 (F9165)** Green disks  
Sire: Gleneith 2013/0103 (F7280)
- **New Armatree 2015/0026 (F7998)** Black disks  
Sire: Two Dot Hurricane 2013/0429 (F7012)
- **New Armatree 2017/0287 (F9459)** Blue disks  
Sire: New Armatree 2015/0070 (F8919)

## Sale Catalogue Averages and Trends

To assist you with your selection, we have included the following table which shows the catalogue average value for all traits along with the highest and lowest figure in the catalogue for that trait.

For your interest, we have also included the averages from the past two catalogues so you can monitor the genetic trends of the sale rams we present each year.

Catalogue	Bwt	Mwwt	Pwwt	Pfat	Pemd	NLW %	BLX
Highest 2019	0.5	1.7	12.5	3.6	2.2	21.0	141.1
Lowest 2019	0.1	-0.9	3.5	-1.1	-0.5	3.0	117.6
Average 2019	0.3	0.5	7.7	0.4	0.9	10.3	125.8
Average 2018	0.3	0.3	7.1	-0.2	0.5	10.0	121.6
Average 2017	0.3	0.3	6.9	0.0	0.4	8.9	119.2

**The 2019 SuperBorder cut off BLX Index figure is 117.3. ALL rams** in this catalogue are **above** 117.3 for BLX and therefore are **Superborders**. - Those ASBVs marked with an \* indicate the animal is in the **top 20%** of the breed for that particular trait. If you would like to discuss these ASBVs further, please ask us on sale day.

Inside the back cover of the catalogue you will find a **Percentile Report**. On this report are a range of trait figures from the top of the breed to the bottom of the breed. The 50 percentile band is close to the average for the breed. Use this chart to check where animals fit within the breed for particular traits and index.

## The BLX Index

This is a **Border Leicester Crossing Index** and has been designed by Lambplan to better reflect the desired traits for first cross ewe production.

Within the **BLX Index** there is more emphasis placed on the maternal traits such as maternal weaning weight and Number of Lambs Weaned (NLW) as well as early growth while capping adult ewe weights. The BLX Index can not and should not be compared to the Maternal \$ Index you might see in other publications.

## Coloured Ear Tags and Disks

While all sale rams have orange numbered ear tags (year of birth, white = 2018), you will also notice a coloured disk on the back of the tag. This coloured disk represents the ram's sire line. We use sires introduced from other studs as well as sires we have bred ourselves. They all carry the colour of the original introduced sire so we can easily identify which line they belong to. Listed below are the colours we have used for this drop of rams and the corresponding sire line. The sire line colours are also noted in the Memorandum of Sires.

**Black = Two Dot    Red = Jackson**

**Blue = Johnos    Pink = Hanookra    Green = Gleneith**

## Australian Sheep Breeding Values

All ASBV's and Indexes used in this catalogue are based on the Sheep Genetics Australia Lambplan Maternal run on 15th August, 2019.

**Bwt: Birth Weight** – estimates the genetic difference between animals in live weight at birth. *Measured in kg.*

**Mwwt: Maternal Weaning Weight** – gives an estimate of the female progeny's potential to provide a good maternal environment for her lambs (includes milking ability). *Measured in kg.*

**Pwwt: Post Weaning Weight** – gives an estimate of the genetic difference in live weight gain between weaning and 8 - 10 months of age. A good indicator of the progeny's ability to grow after weaning to market weights. *Measured in kg.*

**Pfat: Post Weaning Fat** – estimate of the genetic difference in fat depth at 8-10 months of age. *Measured in mm.*

**Pemd: Post Weaning Eye Muscle Depth** – estimate of the genetic difference in eye muscle depth at the C site (loin) at 8-10 months of age. *Measured in mm.*

**NLW: Number of Lambs Weaned (%)** – estimates the genetic difference between female progeny of a ram for the number of lambs weaned at each lambing opportunity. *Expressed as a percentage of the average of animals in the database in 1990.*

**BLX Index: Border Leicester Crossing Index** – indicates the value of an animal based on its suitability for first cross ewe production. *The BLX Index is comprised of ASBVs focussing on maternal and growth traits.*

**Acc: Accuracies** – have been included for all ASBVs and Index. Accuracies are a reflection of the amount of information available about each animal. As the amount of information increases, so too does the accuracy. We are very proud of the amount and quality of the data we collect and are extremely pleased with the consistent and high accuracies we achieve.

SuperBorder\$® is the brand name for Border Leicester rams that are of high genetic merit in maternal traits such as fertility, milk yield, weaning weight and growth rate.

SuperBorder\$ rams are easily identified by their official yellow SuperBorder\$ button ear tags.

SuperBorder\$ Inc. is made up of 15 Border Leicester studs from four states who have realised that selling rams on visual appearance alone may favour early born, well fed single animals, but by using genetic evaluation provided by Lambplan, late born multiples are able to have their genetic potential revealed.

Rams that are marketed as SuperBorder\$ are rams that are above average for the breed, based on the BLX Index figure on the 15th August Lambplan run each year. Not all rams sold by SuperBorder\$ members are necessarily SuperBorder\$, but you can be assured, they are bred by committed, registered breeders striving for strong genetic gain. SuperBorder\$ rams must be structurally correct and of good breed type.

SuperBorder breeders are required to maintain links through the use of common sires. This is usually achieved through AI programs and participation in Sheep CRC research flocks. By having progeny by common sires run in different environments and under different management regimes, Lambplan is able to isolate the genetic factors from the environmental ones and calculate accurate and meaningful ASBV's (Australian Sheep Breeding Values).

First Cross lambs sired by 100% SuperBorder\$ rams may be sold as "Bred from SuperBorder\$". Special yellow pen cards and SuperBorder\$ ear tags are available to identify these animals. Talk to us for more information on these products.
