Welcome,

To our 8th on property ram sale.

The family has been breeding Border Leicester sheep for over fifty years and this year we include a brief history of these sheep on New Armatree. Details on page 27.

Speaking with long time ram clients, Ted and Gwenda Charnley, Ted recalls buying rams back in the early 1970's. Ted keeps detailed records and was able to produce the sale records from the 12th February, 1976 when they purchased 5 rams for \$300 or \$60/head. Ted and Gwenda have been purchasing New Armatree Border Leicesters for 40 years. Only one family has been buying for longer and that is the Ferguson family who have been buying rams since 1974.

We continue to be involved with industry research and the latest project is looking into Maternal Genomics. One of only six Border Leicester flocks to be included nationally, the project involved blood testing our 2014 drop ewes for DNA extraction and genomic mapping. We believe it is important to remain at the leading edge of the breed so we can pass on the benefits to our clients.

Our association with Gilgandra High School produced some excellent sheep handlers this year and they showed the sheep with skill beyond their years bringing home great results from the Dubbo show.

Sheep and cattle prices are at all time highs. Agriculture is certainly a solid business to invest in.

We continue to improve the number of SuperBorder rams we offer in our catalogue without compromising quality. Remember you can follow us via our website

www.newarmatree.com.au or on facebook.

We belong to the Coonamble Biosecurity Area and rams are eligible for sale into all states.

Looking forward to seeing you on sale day.

Jenny & Craig Bradley

Please bring this catalogue with you on sale day

New Armatree Health Record

Brucellosis Flock Accreditation No.....CW 99/17

Expiry Date.....31/08/2019

Vaccinated with 6-in-1 at marking and weaning.

Last vaccination 4th August 2016.

Shorn 15th June 2016

Plunge Dipped 15th July

We do not clip wool or trim feet on these animals, what
you see is what you get.

We recommend that you quarantine drench your rams when
you get them home, according to your drench resistance
and rotation program.

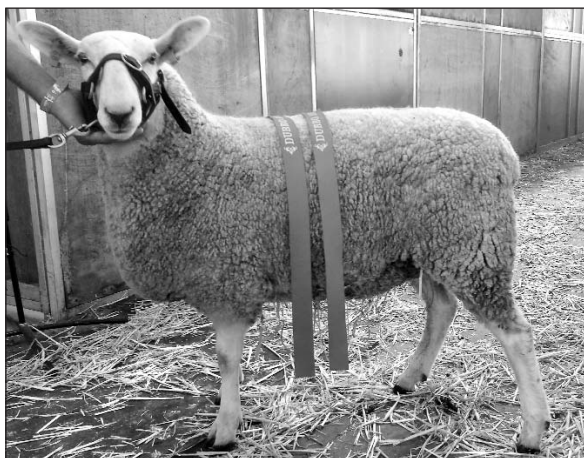

All Rams Vet inspected on the 6th September, 2016.
Vet checked by Dr Nadine Allan - Gilgandra Veterinary
Clinic.

Memorandum of Sires used at “New Armatree” in the 2015 Breeding Season

- **New Armatree Wallace 2011/0034 (F5605)** *White disks*
Sire: Coolawang Wallace 6th 2008/0220 (F3293)

Sire: New Armatree Aramis 2011/0205 (F5608)

*Ewe Objective Measurement
1st in Shorn Class Dubbo, 2nd Objective Measurement*

Sale Catalogue Averages and Trends

To assist you with your selection, we have included the following table which shows the catalogue average value for all traits along with the highest and lowest figure in the catalogue for that trait. For your interest, we have also included the average figures from the past two catalogues so you can monitor the genetic trends of the sale rams we present each year.

Catalogue	Bwt	Mwwt	Pwwt	Pfat	Pemd	NLW %	Maternal\$
Highest 2016	0.56	2.7	9.9	0.8	1.8	19	128.5
Lowest 2016	0.0	-1.5	2.3	-1.1	-1.0	-5	109.4
Average 2016	0.23	0.3	6.2	-0.11	0.41	6.4	117.5
Average 2015	0.17	0.7	5.7	-0.14	0.66	5.7	115.9
Average 2014	0.17	1.0	4.9	-0.15	0.4	4.1	114.8

The 2016 \$SuperBorder cut off Maternal\$ Index figure is 115.8. Those rams in the catalogue which make the \$SuperBorder cut off are denoted by **SB** next to their Maternal\$ figure. Those figures marked with an * indicate the animal is in the **top 10%** of the breed for that particular trait. If you would like to discuss these figures further, please ask us on sale day.

Inside the back cover of the catalogue you will find a Percentile Report. On this report are a range of trait figures from the top of the breed to the bottom of the breed. The 50 percentile band is close to the average for the breed. Use this chart to check where animals fit within the breed for particular traits and index.

Coloured Ear Tags and Disks

While all sale rams have blue numbered ear tags (year of birth, blue = 2015), you will also notice a coloured disk on the back of the tag. This coloured disk represents the ram's sire line. We use sires introduced from other studs as well as sires we have bred ourselves. They all carry the colour of the original introduced sire so we can easily identify which line they belong to. Listed below are the colours we have used for this drop of rams and the corresponding sire line. The sire line colours are also noted in the Memorandum of Sires.

- Black = Two Dot
- White = Coolawang
- Purple = Cadell
- Blue = Johns
- Orange = Tara

Australian Sheep Breeding Values

All ASBV's and Indexes used in this catalogue are based on the Sheep Genetics Australia Lambplan Maternal \$ Index run on 15th August, 2016.

Bwt: Birth Weight – estimates the genetic difference between animals in live weight at birth. *Measured in kg.*

Mwwt: Maternal Weaning Weight – gives an estimate of the female progeny's potential for milk production and ability to provide a better maternal environment. *Measured in kg.*

Pwwt: Post Weaning Weight – gives an estimate of the genetic difference in live weight gain between weaning and 8 - 10 months of age. A good indicator of the progeny's ability to grow after weaning to market weights. *Measured in kg.*

Pfat: Post Weaning Fat – estimate of the genetic difference in fat depth at 8-10 months of age. *Measured in mm.*

Pemd: Post Weaning Eye Muscle Depth – estimate of the genetic difference in eye muscle depth at the C site (loin) at 8-10 months of age. *Measured in mm.*

NLW: Number of Lambs Weaned (%) – estimates the genetic difference between animals for the number of lambs weaned at each lambing opportunity.

Maternal \$ Index: indicates the value of an animal based on its suitability for first cross ewe production. The value is given in real dollar figures and expressed as \$/ewe joined/year. For example a dollar index of 120 indicates a ram will produce \$10 extra value for every ewe joined compared to a ram with a \$ index of 110. Therefore over four years, if a ram produces 300 progeny, the extra value produced by that ram will be $\$10 \times 300 = \3000 .

For more information or advice, please ask prior to, or on sale day.

History of Breeding Borders at New Armatree - Max's Story

Despite only becoming a registered stud 9 years ago New Armatree has a long history of breeding Border Leicesters.

In 1954 Max and Mavis purchased the property and since 1960 Max had always run a flock of breeding ewes and was particular about the rams he introduced to the stud. The 1960 Dubbo Ram Sale saw Max purchase his initial stud ram from the ChandIvan stud, Barham NSW. Max recalled that the ram stood 3rd in the long line of stud rams up for auction. The two rams that placed above him made more money on the day but Max says he purchased this ram for "his balance of wool and carcass as well as having a strong head without too many black spots". For many years after this Max continued to buy rams from the ChandIvan stud as he felt it had "the best Border wool of the time".

His brother Col also had Border Leicesters and ran his flock in conjunction with Max's at "New Armatree" before he relocated his flock to Coonamble where his son Brett Wilson manages this flock. Max maintained a flock number of 90 breeding ewes and it was best practice at the time to shear them every 8 months. The rams produced from this flock were sold to clients locally that included; Col Ferguson, Ted Charnley, Bob Smith and Doug Pagan. "Col Ferg always bought them", said Max "except one year it was so dry no one wanted them". Col's son Mark continues to buy rams from New Armatree today.

Despite never registering them Max always was meticulous in the selection of rams he bought and the ewes that were retained in the flock. Max recalls introducing some new blood into the flock with a ram he purchased in the early 90s from Barry Harper, Cadell, Ariah Park. "We were after a bit more size and stretch in our sheep. Barry delivered the ram to the Narromine First-Cross Ewe sale for us". Max describes his ideal Border Leicester as "having the right balance of wool and carcase, having size without becoming too 'rangey', and a stylish outlook. They also must be productive and put lambs on the ground".

Max's outlook is something that we still follow here at New Armatree and have combined his original concept with today's selection technology to deliver this.

Peta Bradley

Chandler at
Dubbo Show.***

SuperBorder\$® is the brand name for Border Leicester Rams that are of high genetic merit in maternal traits such as fertility, milk yield, weaning weight and growth rate.

SuperBorder rams are easily identified by their official yellow SuperBorder\$ button ear tags.

SuperBorder\$ Inc is made up of 15 Border Leicester studs from five states who have realised that selling rams on visual appearance alone may favour early born, well fed single animals, but by using genetic evaluation provided by Lambplan, late born multiples are able to have their genetic potential revealed.

Rams that are marketed as SuperBorder\$ are rams that are above average for the breed, based on \$ Index figure on the 15th August Lambplan run each year. Not all rams sold by SuperBorder members are necessarily SuperBorder quality, but you can be assured, they are bred by committed, registered breeders striving for strong genetic gain. SuperBorder rams must be structurally correct and of good breed type.

SuperBorder breeders are required to maintain links through the use of common sires. This is usually achieved through AI programs and participation in Sheep CRC research flocks. By having progeny by common sires run in different environments and under different management regimes, Lambplan is able to isolate the genetic factors from the environmental ones and calculate accurate and meaningful ASBV's (Australian Sheep Breeding Values).

First Cross lambs sired by 100% SuperBorder rams may be sold as "Bred from SuperBorder\$". Special yellow pen cards and SuperBorder ear tags are available to identify these animals. Talk to us for more information on these products.

We do more!

More marketing and more ways to help maximise your wool returns - all the way from bale to retail.

Wool marketing

- auction • forward contracts • direct to mill
- specialty programs • DNA

Wool buying

- small & large clips, oddments, butts, bags,
- shed clean outs
- VIC, NSW, SA, TAS

Knitwear manufacturing

- using AWN clients' wool
